# Posters

These days I made a poster for a conference. I learned a few things about how to make good posters.

## Some tips

1. More text under a figure. A template might be like: (What the figure is) (How to interpret the figure) (Assumptions and backgrounds of the figure).
2. Between number and units: add a slash and a comma: e.g. 20 Hz.
3. All the plots should be in the same format (produced by the same software, following the same pattern)
4. Smaller figure captions.
